

|| Bakelite tubes (S.R.B.P. Tube) ||

Bakelite tubes are strong and offer excellent electrical insulation and making them suitable for industrial uses. They are available in various shapes and sizes.

Properties and Application :

Electrical Insulation

A primary use for Bakelite Tube is in electrical engineering due to its high dielectric strength. It is commonly used in switchgear, transformers, and lamp holders to prevent electrical leakage.

Durability & Strength:

Made by mixing the resin with additives and fillers and then molding under high temperature and pressure, the resulting product is durable and strong, often used for mechanical components like bushings and rollers.

Versatility:

They come in various shapes (round, square) and can be easily machined, drilled, or cut to meet specific application requirements.
