

KHANDELWAL INDUSTRIES

AN ISO 9001:2015 CERTIFIED COMPANY

|| Unvarnished Fibre Glass Sleeving ||

Fibre Glass Sleeving is braided from E-glass fibre yarns and designed for insulating electrical wires, cables, and hoses. It provides excellent dielectric strength, heat resistance, and flexibility, ensuring long-lasting protection in high-temperature and electrical environments.

Application:

Fibre Glass Sleeving is widely used for electrical insulation where retention of electrical and mechanical properties at elevated temperatures is required.

Typical Uses :

- Insulation of electrical wires and cables Motor and transformer
- insulation Protection of hoses and pipes
- Automotive and industrial wiring systems

Availability :

- Fibre Glass Sleeving is available in multiple diameters.
- Inner diameter range: 1 mm to 30 mm Standard color: White (other colors on request) Supplied in continuous lengths or cut sizes

Shelf Life:

Woven Fibre Glass Sleeving exhibits no shelf life limitations when stored for up to 12–18 months at approximately 25°C temperature and 50% relative humidity.
