

# KHANDELWAL INDUSTRIES

AN ISO 9001:2015 CERTIFIED COMPANY

## **Fibre Glass Cord:**

Fibre Glass Cord is manufactured from E (Electrical) glass fibre continuous filament yarns. It offers excellent resistance to high temperature low moisture absorption, and superior electrical insulation properties. The product maintains its physical and mechanical strength under extreme thermal conditions, making it suitable for demanding industrial applications.

## **Application:**

Fibre Glass Cords are widely used where the primary requirement is thermal insulation and sealing at high temperatures. They are suitable for static and dynamic sealing applications and provide reliable performance in harsh industrial environments.

## **Typical Uses :**

1. Furnace and boiler door sealing
2. Expansion joints
3. Thermal insulation packing
4. Electrical and mechanical insulation
5. Industrial Gaskets applications
6. Motor Insulation.

## **Availability :**

Fibre Glass Cords are available in various diameters and constructions to suit different applications.

Diameter range: 2 mm to 25 mm

Shapes: Braided and Twisted in Round Shape

Packing: Coils or rolls

Custom sizes available as per customer requirement

## **Shelf Life :**

Fibre Glass Cords exhibit no specific shelf life limitations when stored in dry conditions at ambient temperature and humidity.
