AN ISO 9001:2015 CERTIFIED COMPANY

II Silicone Coated Polyester Film Tape II

Silicone coated polyester film tape release film is a high-performance material with a durable PET (polyester) base and a silicone coating, providing excellent non-stick properties, high heat resistance (often up to 200°C), and strong tensile strength, making it ideal for industrial processes like composite manufacturing where easy separation and temperature stability are crucial. It comes in clear in single and double-sided coatings.
